Section 1: Executive Summary

Project Overview

The project includes designing and developing a contemporary, responsive web application on a modern platform intended for a well-known, Melbourne-based NFP organisation with a mission to focus on Youth Climate Action & Eco-Anxiety Wellbeing. Recent research has shown that increased exposure to climate change news correlates with an increase of youth with an eco-anxiety (Fazal et al., 2025). Currently, effective measures are proven to minimize such anxiety and help in protecting mental health (Schwartz et al., 2022). This web application performs the role of a centralized platform, helping to motivate young people to take relevant actions to mitigate climate change consequences, while addressing eco-anxiety.

Client Objectives

The primary goal of the client is to use technology to increase its capacity and open its services. They want to create a safe, engaging and readily accessible online place where young people could educate themselves, make contacts with people with similar thoughts, get professional psychological help and transform eco-anxiety into climate actions.

Target Audience

The major goal of the client is to use advanced technologies in order to extend the outreach and facilitate service delivery. Clients aim to have a safe, friendly, and convenient website, enabling them to educate young people, connect them with other like-minded peers, and provide them with professional psychological assistance in order to turn eco-anxiety into positive climate action.

Primary Goals of the Web Application

1. **Resource Distribution:** Providing information articles, interactive charts, and coping methods for eco-anxiety;
2. **Community Building:** Providing connection with peers through secured forums and inviting users to book local environmental events (tree-planting, clean-ups), and so forth;
3. **Professional Support Access:** Integrating the system with psychologists in order to give youth an opportunity to book meetings.

Research Insights

Aligning with UX research on modern NFP platforms and on contemporary psychological literature, research shows that effective solutions must combine emotion-regulation and activities. Group programs or group discussions are very important for validating climate distress and feeling normal (Eklöf & Klöckner, 2025). In addition, cognitive-behaviourbased interventions and nature-based strategies for eco-anxiety can build meaningful resilience (Cahyani et al., 2025). Thus, combining calming UI trends with necessary functionality such as secured forums for peer-support, and event organisation, help to find ways to turn eco-anxiety into positive action.

Section 2: Sitemap

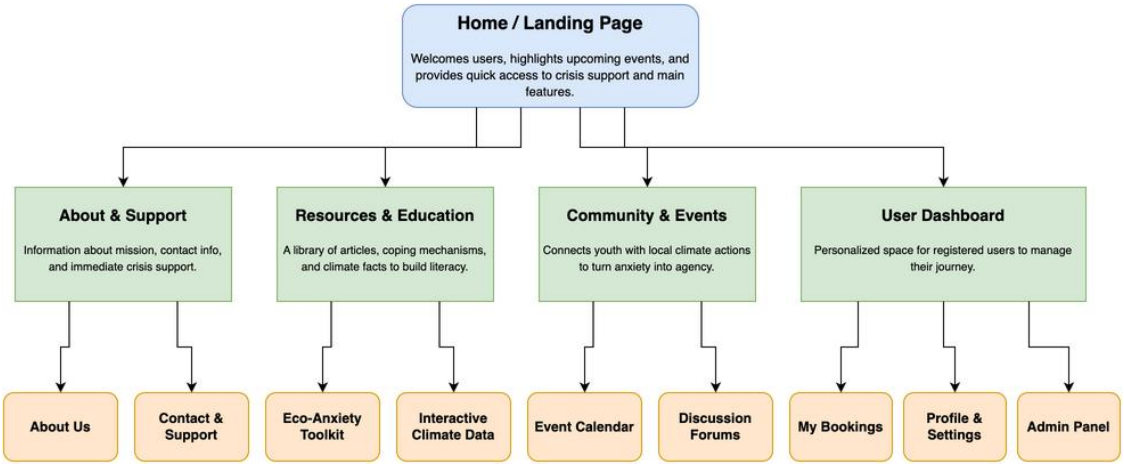

Figure 1 Website Sitemap

[Home / Landing Page]

Purpose: To welcome users, highlight upcoming events, and provide quick access to crisis support and key services.

Sub-pages:

- **[About Us]**: Information about the NFP's mission and team..
- **[Contact & Support]**: General information and helpline numbers for immediate use.

[Resources & Education]

Purpose: Purpose: An archive of articles, coping techniques, and climate factors that help build literacy and manage anxiety.

- **Sub-pages:**
- **[Eco-Anxiety Toolkit]**: downloadable guides (pdf/csv exports) etc..
- **[Interactive Climate Data]**: Visual charts showing local climate impact (Firestore data).

[Community & Events]

- **Purpose:** elps to connect youth with local climate actions in converting the anxiety to service.
- **Sub-pages:**
    - **[Event Calendar]**: Appointment/event booking using FullCalendar API (conflict management).
    - **[Discussion Forums]**: Safe spaces for peer-to-peer connection and sharing.

[User Dashboard (Requires Login)]

- **Purpose:** to create a personal space to the registered users.

Sub-pages:

- **[My Bookings]**: track upcoming booked events.
- **[Profile & Settings]**: control of own information, controlling role, and accessibility options etc.
- **[Admin Panel]** dashboard that shows user statistics and analytics..

Section 3: User Personas

Persona 1: The Anxious Student (Primary User)

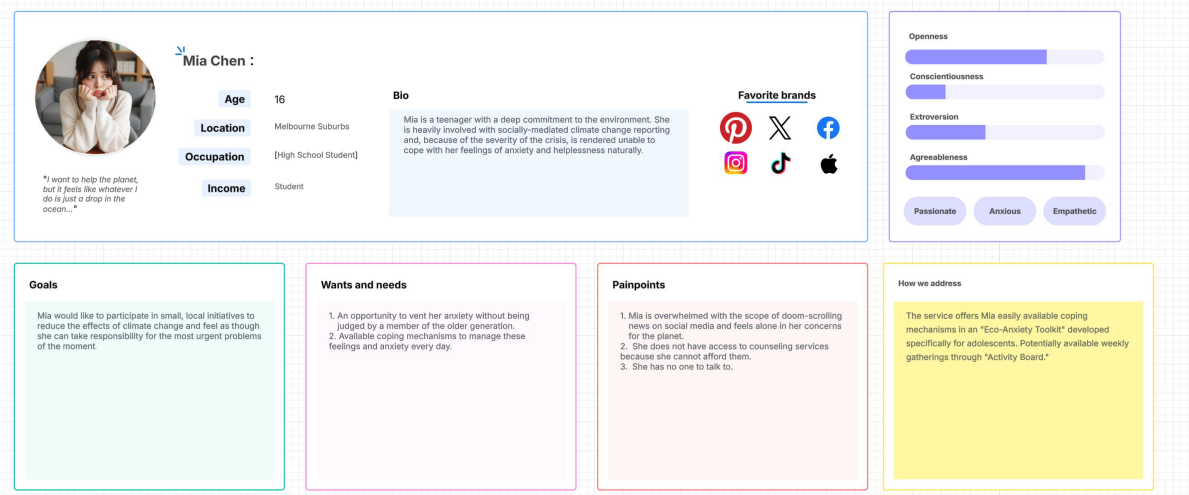

Figure 2 User Persona - Mia Chen

- **Name:** Mia Chen
- **Age:** 16
- **Occupation:** High School Student
- **Location:** Melbourne Suburbs

Demographics: Mia is a young and environmentally friendly person. She constantly reads information about climate change, but feels broken and hopeless because of the scale of the issue, which leads to mild insomnia and eco-anxiety.

Goals and Needs:

- She needs to find small initiatives for action.
- She wants a safe place for expressing fear.
- She needs easy-to-understand strategies for coping.

Pain Points:

- The client is fed up with “doomscrolling”.
- She cannot find peers who would have similar environmental problems.
- The client doesn’t have ready access to mental health services and is afraid of the stigma.

How the Web Application Addresses Her Requirements:

The “Eco-Anxiety Toolkit” is a platform for teenagers, providing immediate strategies for coping with their anxieties. The “Event Calendar” helps Mia look for tree-planting events,

allowing her to act. The safe and secure “Discussion Forums” enable users to interact with each other.

Persona 2: The Proactive Organizer (Primary User)

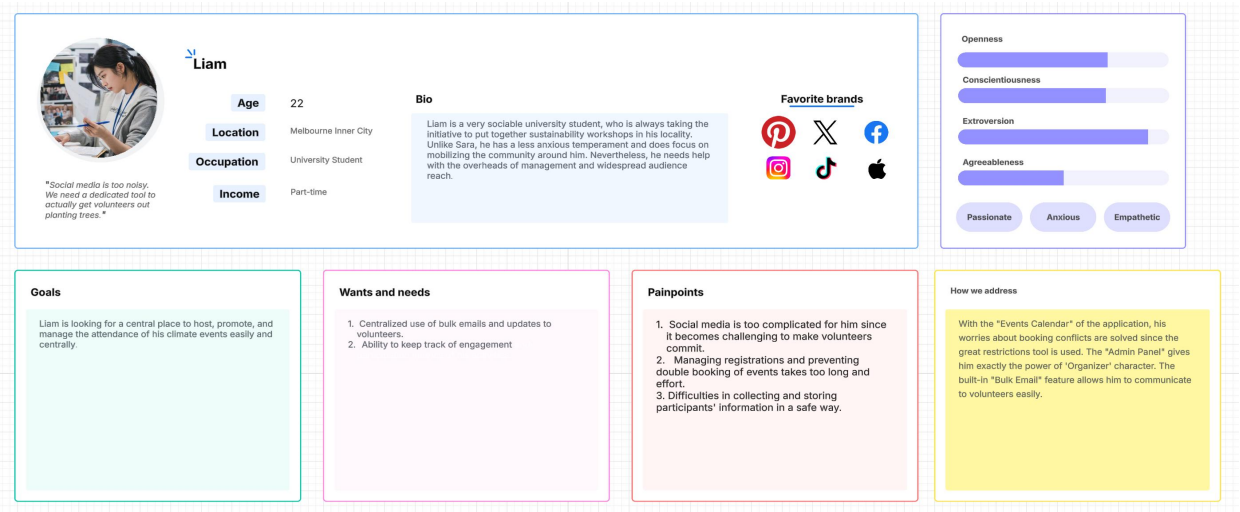

Figure 3 User Persona - Liam O'Connor

- Name: Liam O'Connor
- Age: 22
- Occupation: University Student / Local Climate Activist
- Location: Melbourne Inner City

Demographics: Liam is an energetic university student who busy organizing local sustainability workshop. The client is not worried about the social aspect; he worries about the administration and if he can do everything.

Goals and Needs:

- needs a platform to create, government, and promote his climate activities.
- wants a service for a bulk emails and app, thus reducing communication work.
- wants to monitor engagement and participation of people in his activities.

Pain Points:

- The social media platforms are too noisy and, hence, make it difficult to encourage the volunteers.
- The activities that involve scheduling events can take a lot of time.
- finds it difficult to collect and manage personal data of participants.

How the Web Application Addresses His Requirements:

The application will have an “Event Calendar” to help manage complex booking limitations, thus saving Liam from scheduling difficulties. Thanks to the “Admin” and authentication by levels, he can be assigned ‘Organizer’ privileges to introduce events. Besides this, there will be “Bulk Email” services (from SendGrid) to make his web or mail communication with volunteers easy and take him hours of administration work.

Persona 3: The Supportive Educator (Secondary User)

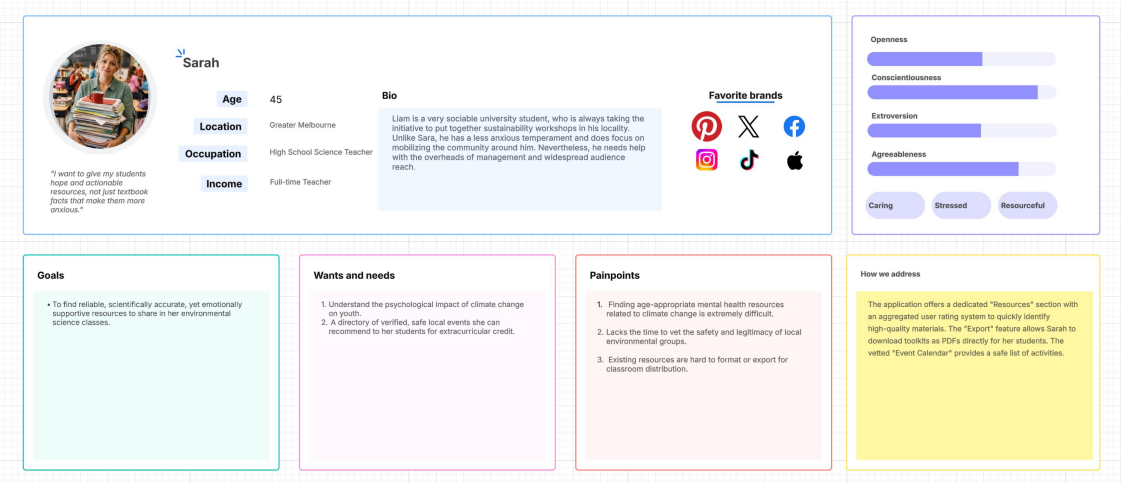

Figure 4 User Persona - Sarah Jenkins

- **Name:** Sarah Jenkins
- **Age:** 45
- **Occupation:** High School Science Teacher
- **Location:** Greater Melbourne

Demographics: Sarah is an environmental science teacher, and she often communicates with students who have eco-anxiety. She is concerned about her students’ mental health, but she doesn’t have appropriate tools to help them somehow.

Goals and Needs:

- Needs reliable, scientifically accurate yet emotionally supportive resources to share in class.
- Wants to know how climate change psychologically impacts youth.
- Searching for directory of trusted local extra credit events that she could recommend to students to participate.

Pain Points:

- Having difficulty finding resources related to mental health and climate change for young people.
- Does not have time to verify the safety and legitimacy of local environmental groups.

- Can it be easily exported for classroom.

How the Web Application Addresses Her Requirements:

The application contains a "Resources" section with the trustful rating system (aggregate), which aids Sarah in identifying materials of the maximum quality in minimum time. She can also use the "Export" function to receive toolkits as PDFs directed toward her pupils. The vetted Event Calendar provides her with a trustful, safe list of events to recommend to the audience members.

Section 4: Wireframes/Low-fidelity prototype

The wireframe objects are aimed at three Business Requirements (BR) to ensure technical viability and flow of user.

Wireframe 1: Login & Registration

Design Rationale: This page is the secure entry point of the platform. The layout takes the psychological tension away from young users by way of a tidy, no-distraction passage. BR C.1 is accomplished through standard email and password fields with validations in place. BR D.1 is achieved because of the interaction of third-party External Authentication (e.g. signing up through Google, Apple SSO) wherein users do not have to take the time to fill out a long form.

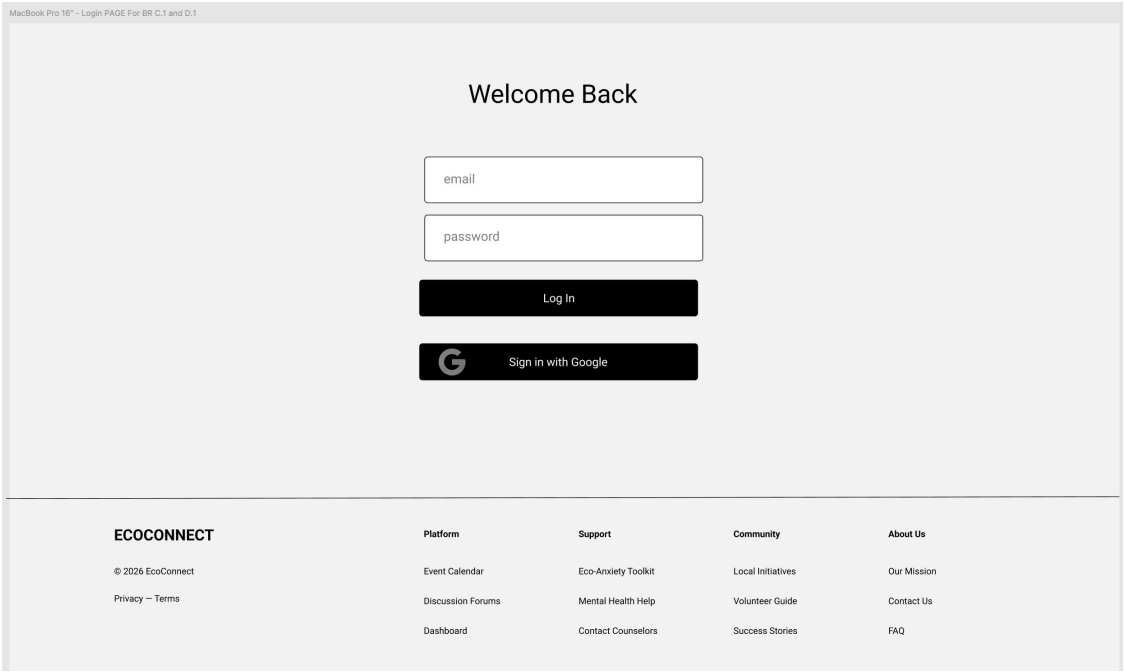

Figure 5 Wireframe - Login & Registration Page

Wireframe 2: Event Calendar

Design Rationale: To take users from a passive state of anxiety to an active one, there is a visual calendar which is easy and effective to engage with. BR F.1 is enacted through the use of a calendar plugin, that catalogues local climate events (e.g. River Cleanups, Planting Trees) that are coming up. The visible event cards below the calendar contain efficient dates, details, and "RSVP" functions. This design fulfills research evidence that demonstrated that collective environment actions alleviate eco-anxiety

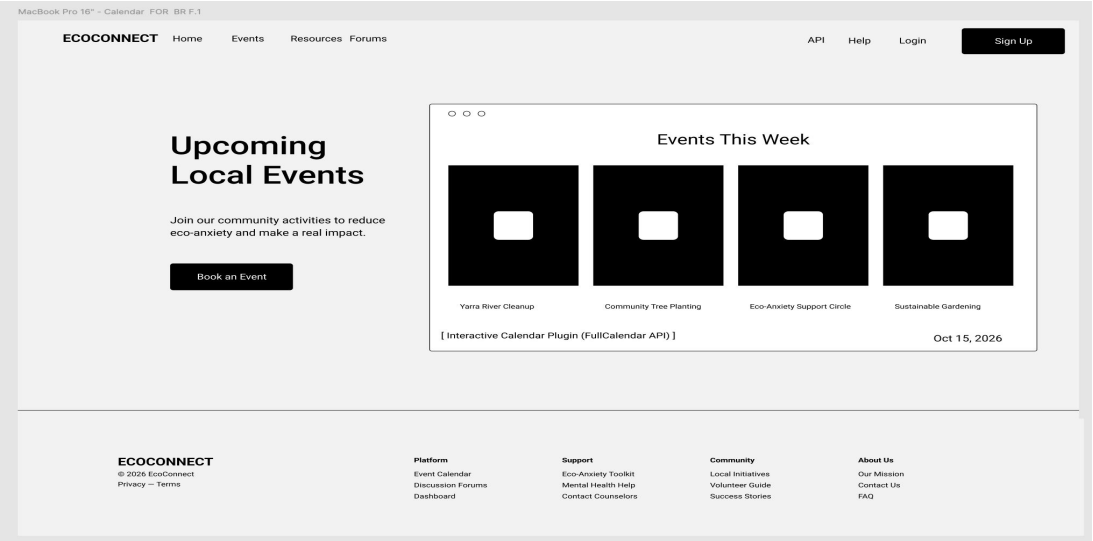

Figure 6 Wireframe - Event Calendar Page

Wireframe 3: Resources Library & Data Table

Design Rationale: This interface acts as the fundamental educational and psychological tool kit of the app. By organizing coping techniques, articles, and links to therapy into a tidy, searchable, and sortable data table, it executes BR D.3 in allowing users to locate specific support. Amongst other ways, BR C.3 is executed through a community rating column (e.g. 5-star rating), allowing users to evaluate and endorse the materials that will most helpful to others in a communal trust environment.
